

CLEARER SKIN IN A FLASH THE FUTURE OF ACNE TREATMENT

Introducing AviClear™ the first and only FDA-cleared laser treatment for mild to severe acne.

About AviClear™

AviClear resolves acne, the #1 dermatological skin condition affecting over 50 million people.¹ AviClear is a prescription-free, drug-free laser treatment that is safe for all skin types and tones. AviClear can provide lasting clearance without significant side effects in just three 30-minute treatment sessions.²

BEFORE

3 MONTHS AFTER FINAL TREATMENT SESSION

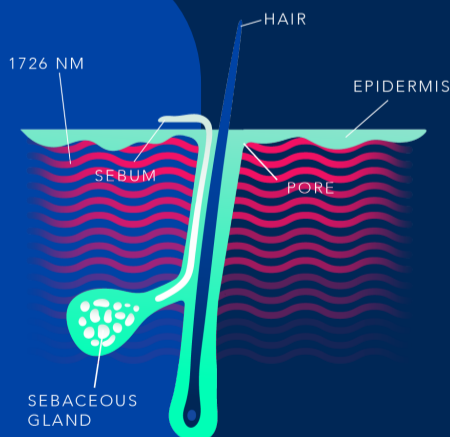

How AviClear Works:

To understand how AviClear works, it's important to understand how breakouts happen. Acne forms when sebum, the oily substance on skin, combines with dead skin cells and clogs pores.³

This revolutionary laser treatment uses a 1726nm wavelength to treat acne at the source by selectively targeting and down regulating the sebaceous glands. AviClear is equipped with exclusive AviCool™ sapphire skin cooling and sensory controls that maintain the skin's temperature during treatment for a more comfortable experience. After an AviClear treatment, patients will produce less oil, and acne will get better and stay better.

Why AviClear is Different:

Most acne treatments target other things that cause acne, but not the production of sebum.⁴ Before now, there were few options, like Isotretinoin, to control sebum offering long-term clearance and were only offered to the most severe patients after failing other treatments, and those who could comply with the stringent requirements.⁵ Patients can enjoy clear skin without the routine.

AviClear Clinical Data

In clinical studies 80% of patients saw at least half of their acne clear after 3 treatment sessions. 87% of patients report being "satisfied" or "very satisfied" at week 12. There were no significant adverse events were observed in the clinical trials & all post-treatment effects were transient and self-resolving.⁶

AviClear Quick Facts

- The first and only FDA-cleared energy device for the treatment of mild to severe acne
- No harmful side effects
- Quick treatments with no downtime
- Significantly eliminates acne in just three, quick 30-minute treatment sessions
- After treatment, breakouts are shorter with fewer and smaller flare-ups
- No significant adverse events were observed in the clinical trials
- Safe for all skin types and tones all year round
- Safe and comfortable treatment experience with AviCool™
- Patients can resume activities immediately after treatment

AviClear Availability

AviClear is expected to be made available to physicians throughout the USA over the course of 2022.
