Aveli Cellulite Removal

Pre/Post Operative Instructions

Important Information from Dr. Rohit Jaiswal, MD
at DrSkin Plastic Surgery, Regenerative & Medical Spa

Congratulations!

Congratulations on successfully undergoing your surgery! This document has been meticulously crafted to guide you through the post-operative process, with the goal of ensuring the smoothest possible recovery and achieving the best possible outcomes. It is of paramount importance that you review this information in its entirety and adhere strictly to all provided instructions. Your diligent compliance will significantly contribute to the overall success of your recovery.

Should you have any questions or require further clarification, please do not hesitate to contact Dr. Jaiswal and the expert medical staff directly at DrSkin Med Spa at **(888) 717-1631**.

Before Surgery

Please stop taking the following two weeks before surgery: Aspirin, Ibuprofen, Aleve, Fish Oil, Red Wine, Multi-Vitamins and/or Vitamin E.

If you take blood pressure or diabetes medications, continue these as normal.

No smoking or vaping for 4 weeks prior to surgery and 2 months after surgery.

Day of Surgery

Please arrive at the instructed time and facility.

Take a shower with the medicated antibacterial soap, if prescribed.

Take pre op medications 30 minutes prior to the procedure.

After Surgery

Take medications as directed.

Be sure to finish your antibiotic course if prescribed.

Regular underwear can be used.

POST OPERATIVE TIMELINE

- **0-7 days:** There will be significant swelling and bruising. You can shower the day after surgery. Keep bandages in place.
- **1-2 weeks:** Swelling will start improving. Bruising will gradually fade. Remove bandages.
- **4 weeks:** Swelling should be improving though still present. Bruising should be gone.
- **1-3 months:** Swelling will continue to improve. Exercise is ok.
- **3-12 months:** Final results will become apparent. If any additional treatments are needed, they can be considered at this time point only.

MEDICATIONS

You will be prescribed medications as part of your post-operative care. It is essential that you obtain these medications prior to your surgery. Once acquired, please take a photo of your medications and send it to us to confirm that you have received all the necessary prescriptions.

Post-operative care is a critical component in facilitating the smoothest and most successful recovery. For this reason, it is crucial that you adhere carefully to the following instructions:

- **Avoid:** Aspirin, Ibuprofen, Benadryl, all supplements until cleared by Dr. Jaiswal.

- **Activity restrictions:** Limit exercise for 1 month. Limit walking for one month. No sex for 1 month at least.

- **Sleeping:** Sleep in any position.

- **Expectations:** It can take 6 months (or longer) to see the final results. Some recurrence of looseness is inevitable.

- **Being reasonable:** Surgery is meant to create an improvement, NOT perfection! There may be small areas after healing you wish looked a little better this is NORMAL. Everyone has imperfections, even after surgery. You can choose to focus on the improvement or choose to focus on what you wish was different, what you focus on will determine your satisfaction.

- **Happiness:** Surgery, or changing your appearance, won't make you happy by itself. While improving your appearance can make you more confident, it is not meant to perform a psychological makeover. Happiness comes from choice and gratitude. Being able to afford and undergo plastic surgery is a luxury billions of people around the world do not have. Understand this and have gratitude you are fortunate enough to get a procedure done!

IMPORTANT SUPPLEMENTS

Protein

Why should I take this supplement? Protein is necessary for healing. Having an open wound and/or undergoing surgery increases your protein requirements.

Side effects: Avoid if you have kidney disease or are on dialysis.

Glutamine and Arginine

Why should I take this supplement? Glutamine and Arginine are amino-acids which help with wound healing.

Side effects: Common side effects include gastrointestinal issues. Arginine should be avoided in patients with low blood pressure.

Vitamins and Minerals

Why should I take this supplement? Certain vitamins and minerals help wound healing. Surgery can increase how much you need and they can be used to improve wound healing.

Vitamin A

Side effects: Patients with abnormal liver function or malnutrition can accumulate leading to side effects. Side effects include dry mucous membranes, vomiting, headache, muscle or bone pain, and hair loss.

Vitamin C

Side effects: This is relatively well tolerated except in patients with a history of kidney stones. Common side effects are gastrointestinal issues.

Vitamin D

Side effects: In patients with a history of kidney stones, Vitamin D can result in an increased risk.

Zinc

Side effects: Common side effects are gastrointestinal issues.

Omega-3 fatty acids

Why should I take this supplement? Omega 3 fatty acids can help with wound healing, inflammation and preventing infection.

Side effects: Common side effects include gastrointestinal issues.

Probiotics

Why should I take this supplement? Your body's natural intestinal flora serves a wide range of functions including immunity, healing, and nutrition. Surgery and especially antibiotics can alter the normal function of your intestines leading to poor healing immunity, nutrition, and motility.

Side effects: Common side effects are bloating and diarrhea.

Homeopathic Therapies

Curcumin- a natural compound found in turmeric, a spice. Why should I take this supplement? This supplement is an anti-oxidant that can help wound healing and prevent infection.

Side effects: None known

Arnica- extracted from Arnica montana, a plant that grows in the Swiss Alps. Why should I take this supplement? This supplement can decrease bruising and swelling.

Side effects: None known

Bromelain- an enzyme found in pineapples. Why should I take this supplement? This supplement can decrease bruising, swelling, and sometimes pain.

Side effects: None known
